

ABSTRACT OF THE DISCLOSURE

A method of sending an email to an email address, or other electronic message to an electronic address, including a caller dialing a telephone number and inputting a communication code, such as a telephone number, to a central computer to which he is connected. The central computer identifies the intended recipient of the message, either
5 by the telephone number dialed by the caller or by the caller inputting an identifier, such as a PIN. The email message is emailed to the intended recipient's electronic address, which can be a wireless telephone, a PC, a PDA or other device.
